

# ABSTRACT

A sound control system includes a digital mixing system, a control system, and a private control system. The professional operator who is experienced in handling of the digital mixing system executes detailed settings of respective parameters associated with the mixing process of the digital mixing system by using the control system. The amateur operator who is inexperienced in the handling of the digital mixing system executes settings of a part of parameters out of the parameters that are authorized by the professional operator, etc. by using the private control system.
